MODERN COLLEGE IN A HISTORIC UNIVERSITY

Founded in 1889 by His Majesty King Chulalongkorn the Great (Rama V), Mahidol University is one of the oldest educational institutions in Thailand. Over the last one hundred and twenty six years (1889-2015), Mahidol has undergone many changes and advances. Including MUIC (established in 1986), there are now 17 faculties (responsible for both research and teaching), 7 Institutes (focusing mainly on research) and 6 colleges (focusing mainly on teaching). Altogether, the university supports a student body of over 27,000, and over 400 academic programs. With over 3,400 faculty members, the teacher-student ratio is 1:8, the best ratio in any Thai institution of higher education.

Mahidol University International College (MUIC) was founded in 1986 to provide a high standard of international education and to develop a teaching culture that encourages independent and analytical thought and serves students who want an international style university education in English in a four-year program leading to a Bachelor's Degree in Science, the Arts, Business Administration, Engineering and Nursing Science. A modern and forwarding thinking international college, MUIC continues to stress the key elements in university education: learning in math and science; literacy in the English language, literature, philosophy and the arts; and practice in communication skills. Graduates are known for their problem-solving ability and communication skills. Following graduation, the majority of students enters management positions or pursues higher level postgraduate studies both in Thailand and abroad. As part of its international role, MUIC has been involved in many collaborative activities with foreign universities. Visiting professors from overseas have taught many of the courses and have close links with a number of foreign universities and colleges.

Students learn how to analyze situations and implement strategies under different market environments through lectures, class discussions, case studies and projects.

ENTERTAINMENT MEDIA PRODUCTION PROGRAM

TELEVISION PRODUCTION

DEGREES OFFERED

Bachelor of Arts (Television Production)

B.A. (Television Production)

THE FIELD

The Entertainment Media Program offers a strong liberal arts education in modern media creation and visual literacy. The courses are taught within the context of aesthetics, history, theory and personal expression and require intensive hands-on participation in each of the specific majors of entertainment media. The Television Production Major provides a core education in the creation of television productions and the mastery of television related professions. In addition to hands-on class experience, students learn the history and theory of television studies as well as take classes that employ a critical look at television programming. As they proceed through the program, students learn the principles of storyboarding, pre-production, directing, producing, editing and camerawork. Additional classes deal with principles of news gathering, documentary and public affairs programming, performing before the camera and sound editing. Both required and elective classes within the major also give students an opportunity to study television programming, marketing and sales, theories of production and audience response, and critical studies of television. The faculty includes full-time scholars in the field as well as part-time and visiting faculty, all of whom are specialists in the creation of television production and aesthetics.

The Field

The Intercultural Studies Program provides an interdisciplinary and truly global approach to prepare students for a world in which they need to engage and interact in various cultural contexts. The program aims to be innovative in its design and responsive to today's rapidly changing world, while remaining faithful to the ideals of the liberal arts tradition, foremost of which is to promote good global citizenship by fostering cultural appreciation, critical thinking skills, ethical leadership, and creative problem solving. This major brings together diverse aspects of a humanities/ liberal arts education: a broad range of methods, perspectives and challenges are explored in the areas of language, culture, and economics. In doing so, the program aims to foster the analytical and intuitive thinking skills, creativity, communicative facility and ethical awareness that prepare students to be future decision-makers and lifelong learners.

All students in the Intercultural Studies major study a common set of core courses designed to introduce them to theories and methodology in Intercultural Studies in addition to new fields and subfields of various related disciplines. Depending on their interests and abilities, students are encouraged to decide on one of three concentrations with close consultation with their advisor. Regular joint symposiums with faculty and students aim to develop a learning community that encourages knowledge creation and the exchange of ideas between students and instructors in the different orientations. In their final academic year, they are required to conduct, in any two higher-level courses of their choice, an independent research project.

The program while developing competencies that are fundamental to all careers will be of particular benefit to students preparing for graduate studies or further training in the field of humanities, such as in cultural studies, law, art, economics and politics. The strong interdisciplinary approach aims to widen students' intellectual abilities and analytical thinking so that they are competent decision-makers operating on a global sphere.

SCIENCE Division

BIOLOGICAL SCIENCE PROGRAM

DEGREE OFFERED

1. Bachelor of Science (Biological Sciences: Biology)
 2. Bachelor of Science (Biological Sciences: Biomedical Science)
 3. Bachelor of Science (Biological Sciences: Biotechnology)
- B.Sc. (Biological Sciences)**

THE FIELD

The Biological Science Program of MUIC offers quality education which allows students entry into a wide variety of occupations, professional degree programs and advanced research degree programs. The courses offered are surprisingly diverse for a college as small as MUIC, and are both interesting and challenging. Required courses emphasize the basic principles required for all advanced programs. These principles cover every field from environmental science, population biology and regulatory biology to cell and molecular biology. The program offers three modules: Biology, Biomedical Science, and Biotechnology.

Biology is the science of life. The vast scope of its subject matter makes biology an extremely diverse field of study. This diversity stems not only from the tremendous variety of life forms with which we share our planet but also from the multiple levels of organization available for biological investigation. Given an organism, a biologist might choose to investigate how it behaves, how it fits into its ecosystem, the mechanisms by which its genes shape its appearance, what its ancestors were like, how its cells divide, how it grows and develops or how it derives energy from nourishment. Biological inquiry encompasses perspectives from the planetary to the sub- microscopic.

Biomedical science provides an understanding of the human body and the way it works. Graduates are prepared to pursue professions allied with medical research. These include areas such as human anatomy and physiology, pharmacology and toxicology, pathobiology, neurobiology, epidemiology and tropical medicine.

Biotechnology is a discipline in which technology is applied in the production or modification of molecules, or manipulation of living organisms, to develop useful products, processes or services. Biotechnology encompasses a wide range of fields, including biological science, biochemistry, medicine, agriculture, environmental science and many more. It also includes various technologies, for example, recombinant DNA technology, gene transfer, embryo manipulation and transfer, monoclonal antibody production and fermentation process for the production of various microbial cells and metabolites.

CAREER OPPORTUNITIES

For many biology majors, undergraduate studies is the preliminary step in pursuing an advanced degree that will lead to a career as a medical doctor, dentist, veterinarian, academic or scientist. A graduate degree is not required; however, it is encouraged in pursuing a career related to biology. A bachelor's degree in biology can also lead to

employment in the large and growing biotechnology, health care or pharmaceutical industries. Many openings in the dynamic, high-tech fields require a degree in the life sciences.

Biology majors are likewise well prepared for careers as secondary-school science teachers and in certain government agencies, including the departments of natural resources and health, state or national parks and environmental regulatory offices. Businesses and industries also hire biologists to conduct technical research to sell scientific equipment and supplies and to work as lab technicians. Many students interested in medical careers major in biology as undergraduates. Teaching biology in high school or middle school is another career choice of biology majors.

The aim of the biomedical science major is to provide graduates with the scientific, technical, communication and team-work skills suitable for direct entry into a wide range of biomedical careers. Graduates are able to work in industry, hospitals, medical schools or graduate programs in all fields of biological sciences and medical sciences (anatomy, physiology, microbiology, pathobiology, pharmacology). Biomedical researchers apply their scientific knowledge to a range of problems in medicine and the health sciences. Depending on their area of interest, they investigate aspects of the structure and function of the human body, disease and disease prevention.

Biotechnology graduates can pursue their careers in a number of ways, i.e., research science positions in laboratories applying biotechnology to problems in food and pharmaceutical industry and agricultural products; management positions in the biotechnology industry; positions at companies that are investing in biotechnology; and working for law firms in biotechnology.

THE FIELD

Chemistry plays an important role in the shaping of our everyday lives. The applications of its concepts are the genesis of many modern-day objects and useful materials. It is chemistry that forms the foundations of other scientific disciplines, such as pharmaceuticals, petroleum, petrochemical, biological sciences, polymer sciences and even automotive-catalysts. Modern-day chemistry has developed to such an extent that physics, particularly quantum mechanics, has become interwoven and indispensable towards the understanding of chemical reactions and molecular structural characterizations. In modern-day chemical research, the notion of interdisciplinary disciplines, such as the crossovers into the realm of biological and physical problems which include nano phenomenon, is now the norm.

The Chemistry Program at Mahidol University International College reflects and is built upon the changes that have occurred in the discipline over the last few decades. Chemistry majors are taught with full rigor the essential and key subjects such as General Chemistry, Organic Chemistry, Inorganic Chemistry, Analytical Chemistry and Physical Chemistry. One trimester is allotted for mandatory Quantum Mechanics. Reflecting the modern trends of chemistry, the students, by means of selecting appropriate elective courses, can choose physical chemistry, biochemistry or biological chemistry, industrial chemistry or advanced organic chemistry elective courses. The elective courses in the Chemistry Program offer the Chemistry students the opportunity to shape their own track of preferred courses after completing the core and required chemistry courses. In the elective courses, we offer 4 different modules, equivalent to concentrations, which are biochemistry, chemistry, industrial chemistry and organic chemistry.

CAREER OPPORTUNITIES

Career opportunities include lucrative positions with pharmaceutical companies and other related industries. There are many opportunities for chemists in governmental positions. In addition, chemists are engaged in a large number of related and sometime diverse fields that include medicine, dentistry, law, international secondary school education, administration, technical sales, scientific journalism, the illustrative arts and even banking. Chemists are also desirable in research positions in all fields of sciences.

COMPUTER ENGINEERING PROGRAM

DEGREE OFFERED

Bachelor of Engineering (Computer Engineering)

B.Eng. (Computer Engineering)

THE FIELD

Computer Engineering is defined as the discipline that embodies the science and technology of design, construction, implementation and maintenance of software and hardware components of modern computing systems and computer controlled equipment. Computer engineering has traditionally been viewed as a combination of both computer science and electrical engineering. It has evolved over the past three decades as a separate, although intimately related, discipline. Computer engineering is solidly grounded in the theories and principles of computing, mathematics, science and engineering; it applies these theories and principles to solve technical problems through the design of computing hardware, software, networks and processes.

Technological advances and innovation continue to drive computer engineering. There is now a convergence of several established technologies (such as television, computer and networking technologies) resulting in widespread and ready access to information on an enormous scale. This has created many opportunities and challenges for computer engineers. This convergence of technologies and the associated innovation lie at the heart of economic development and the future of many organizations. The situation bodes well for a successful career in computer engineering.

CAREER OPPORTUNITIES

Increasingly, computer engineers are involved in the design of computer-based systems to address highly specialized and specific application needs. Computer engineers work in most industries, including the computer, aerospace, telecommunications, power production, manufacturing, defense and electronics industries. They design high-tech devices ranging from tiny microelectronic integrated-circuit chips to powerful systems that utilize those chips and efficient telecommunication systems that interconnect those systems. A wide array of complex technological systems, such as power generation and distribution systems and modern processing and manufacturing plants, rely on computer systems developed and designed by computer engineers.

COMPUTER SCIENCE

PROGRAM

DEGREE OFFERED

Bachelor of Science (Computer Science)

B.Sc. (Computer Science)

THE FIELD

Computer Science is one of the promising disciplines for career opportunities. It emphasizes a wide range of computing fields from theoretical foundations to state-of-the-art technology development in large-scale system development, database, mobile and internet programming, computer networks, intelligent systems and more. Students majoring in Computer Science will receive solid foundations in the areas of theoretical computing, programming, systems analysis, design and development, information management, database and computer security.

The Computer Science Program at MUIC offers students the opportunity to become qualified professionals in many areas of interest in terms of theory, software, applications and hardware. This includes programming languages, software engineering, system analysis and design, database, operating systems, computer architecture, computer graphics, distributed systems, computer networks, numerical analysis, artificial intelligence, data warehousing and mining, and information technology management.

CAREER OPPORTUNITIES

The Computer Science major is designed to prepare students for the following career paths:

- System development: Jobs in this category includes system analysis and design, web development, interface design, security issues and mobile computing. Career opportunities are available in a wide variety of software companies, computer services companies and organizations (industry, government, banking, healthcare, etc.).
- Innovation of computer technology application: Career opportunities in this area can involve a position at a research university or industrial research and development laboratory, entrepreneurial activity or a combination of the two.
- Computing solution development: This involves applying and developing computer science theory algorithms for the best possible solutions for computationally intensive problems. Career opportunities typically require graduate work on a Ph.D. level, followed by a position at a research university or an industrial research and development laboratory.
- Organizational technology infrastructure planning and management: This also offers the type of work aimed at those who study information technology (IT).

ENVIRONMENTAL SCIENCE PROGRAM

DEGREE OFFERED

Bachelor of Science (Environmental Science)

B.Sc. (Environmental Science)

THE FIELD

Contemporary society is being challenged by a diverse array of extremely complex environmental problems driven by rapid increases in population and the demands on our life-support systems. Increased environmental pollution from the physical, chemical, and biological contaminants generated by industrial activities, agriculture and food production, and poor natural resource management continue to threaten the ecological and economic stability of our planet. Environmental studies have become necessary to meet the needs of the present age.

The Environmental Science Program provides educational and technical services in the fields of environment and natural resource management. The program trains students to explore environmental issues in Thailand and to conduct research projects with an aim towards sustainable development. Environment students learn how to follow a rigorous interdisciplinary approach to measure, quantify, predict and resolve serious environmental threats by integrating knowledge from appropriate disciplines. Students are expected to respond to issues such as natural resources conservation, ecosystem restoration, global warming, waste management, ground and surface water contamination, chemical toxicity, pollution prevention and control, and environmental planning and decision making.

CAREER OPPORTUNITIES

The B.Sc. degree in Environmental Science leads to a variety of career opportunities in private industry and governmental agencies concerned with environmental quality assessment, community environment programs and interagency coordination in environmental quality maintenance. Graduates can work as scholars, researchers, experts on the national and international levels, as well as in the public sector in the supervision of the environment and its resources in addition to private and business sectors in the production of goods and services, which require secured technology to the environment, monitoring environment and reducing pollution in the environmental organization for competition and sustenance.

Graduates are well prepared for their further studies in postgraduate levels in environmental and resources management, environmental biology, applied biology, conservation biology, environmental toxicology and environmental technology.

FOOD SCIENCE AND TECHNOLOGY PROGRAM

DEGREE OFFERED

Bachelor of Science (Food Science and Technology)

B.Sc. (Food Science and Technology)

THE FIELD

Food Science and Technology involves the application of a variety of scientific disciplines to food manufacturing. Food Science and Technology students learn the chemistry, microbiology, structure, engineering, safety and nutrition of food as it is processed, packed, distributed, stored and used.

Food manufacturing is the mass production of food products from raw animal and plant materials, utilizing principles of food technology. It is one of the largest industries in Thailand and involves the selection, preservation, processing, packaging, distribution and use of safe, nutritious, and wholesome food. Modern consumers generally take for granted the vast array of foods available in their modern diet and do not know about the extensive research and development that has been done in order to deliver tasty, nutritious, safe and convenient foods.

A Food Scientist studies the physical, microbiological and chemical makeup of food and compiles information about foods and their components. Depending on their area of specialization, Food Scientists may develop ways to process, preserve, package or store food according to industry and government specifications and regulations, either domestically or internationally.

CAREER OPPORTUNITIES

In Thailand, the food manufacturing industry caters to both the local market and export-oriented opportunities. Our international clients include neighboring ASEAN countries as well as the larger export markets of Europe, North America and Japan. Thus there is often a need for highly trained technical personnel who are able to communicate well in English because in these countries most people concerned with food imports use English as a second language. In the Food Science and Technology Program at MUIC, students receive rigorous theoretical and practical training in the basic sciences as well as in applied food technology, similar to what is found in most food technology programs.

The difference at MUIC is that all lectures, written materials, special lectures and trips are in English. International graduate studies programs, either in Thailand or abroad, typically require a strong command of English, as demonstrated in standard English exams such as TOEFL or IELTS. This gives the MUIC Food Science and Technology graduates a huge competitive advantage upon completion of their degrees. Because of their broad scientific and technical background, graduates are well prepared to work in the food manufacturing industry or to continue their studies toward a master's or doctorate degree in either Food Science or other related subjects.

PHYSICS PROGRAM

DEGREE OFFERED

Bachelor of Science (Physics)

B.Sc. (Physics)

THE FIELD

Physics, one of the major basic sciences, essentially focuses on the elements of matter, their interaction, energy and applications. Physics plays a fundamental role both in the sciences and in the world of technology. It also provides the skills for dealing with all of the scientific concepts. An understanding of physics is also useful for students in social sciences and valuable for anyone interested in the full range of human culture. MUIC offers a Physics Major to produce graduates who are knowledgeable and highly qualified in this scientific discipline. There is a great demand for graduates in physics who can contribute to both national development in science and technology and international scientific advancement.

CAREER OPPORTUNITIES

Excellent career opportunities for Physics and Applied Physics graduates exist. Graduates in physics can work as researchers or laboratory assistants in industrial R&D and government agencies, including the departments of science and technology. Graduates are able to work in hospitals, medical schools or graduate programs in all fields of medical physics and physical science. For many Physics majors, undergraduate studies are only a preliminary to the pursuit of an advanced degree that will lead to a career as an academic, scientist or researcher.

SOCIAL SCIENCE

Division

SOCIAL SCIENCE PROGRAM

DEGREE OFFERED

Bachelor of Arts (Social Science)

B.A. (Social Science)

There are 3 concentrations:

1. International Studies
2. Modern World History
3. Southeast Asian Studies

THE FIELD

The Social Science Division currently offers three separate program concentrations: International Studies, Modern World History and Southeast Asian Studies. Students enrolled in these tracks complete a shared set of core courses on history, theory, research methods and contemporary affairs as they develop their respective areas of expertise. In their final year of study, Social Science majors are also required to conduct a term-length research project on a topic of their own choosing under the guidance of a full-time faculty member. During the course of their study, students have ample opportunity to participate in academic seminars and conferences. The Social Science Division regularly organizes forums and events to foster learning at the College and, in conjunction with partner universities, around the region.

Career Opportunities

In addition to providing students with expertise in their chosen fields of study, the Social Science Division is committed to helping program majors develop their capacity for communication, problem solving and critical thinking – skills that allow our graduates to operate in a wide range of career settings. Our alumni can be found in politics, law, public administration and international organizations. They are also in a number of different non-governmental organizations, media enterprises, marketing firms and educational institutions. Many have gone on to pursue higher degrees at some of the better graduate programs in Europe and the United States.

TOURISM AND HOSPITALITY MANAGEMENT

Division

INTERNATIONAL HOSPITALITY MANAGEMENT PROGRAM

DEGREE OFFERED

**Bachelor of Business Administration
(International Hospitality Management)
B.B.A. (International Hospitality Management)**

There are 3 Modules:

1. Hotel and Restaurant Management
2. Event and MICE Management
3. Tourism Management

THE FIELD

The tourism and hospitality industry is one of the fastest growing and most dynamic industries in the world. This is especially true in Thailand where this industry has enormous importance for both the public and private sectors. In line with industry needs, the focus of the International Hospitality Management (IHM) Major is the critical interface between theory and practice. This is clearly demonstrated by the curriculum's strong managerial and vocational nature, its analytical approach to this global industry and its commitment to sustainable development.

As part of its commitment to both students and industry, MUIC operates its own fully functional hotel and training center, the Salaya Pavilion, where students can gain genuine insight into the running and management of a live hotel and experience real-life situations, guests, functions and events.

At MUIC, the integration of faculty expertise, industry connections and state-of-the-art facilities provides the most comprehensive learning and training environment in Asia.

To provide students with a greater range of career options, the International Hospitality Management major provides three specialized modules from which students can choose: 1) Hotel and Restaurant Management, 2) Event and MICE Management and 3) Tourism Management.

Hotel and Restaurant Management Module:

The Hotel and Restaurant Management Module focuses on the importance of quality services within hotels, strategic management, service marketing, human resource training and development, food and beverage management, facilities design, and feasibility studies and business development in the industry. In this module students are trained within the individual departments of a hotel, and more importantly, are trained from a managerial perspective. The students also have an opportunity to put the management training and theory into practice during their internships with industry practitioners.

Event and MICE Management Module:

The MICE and Event Management Module prepares students for careers in event and MICE management businesses. In this module, students gain knowledge and experiences in planning, designing, organizing, budgeting and implementing special events, sport events, meetings, incentives, conventions, conferences, exhibitions and expositions. It also provides students with professional preparation, focusing on the concepts and principles involved in event and MICE management, budgets and finance, site selection, contracts, vendors, negotiations, marketing and promotions, food and beverage management, modern technology, hospitality law and event logistics. The event and MICE industry is an exciting, fast-paced field that allows and encourages creativity and innovation.

Tourism Management Module:

The Tourism Management Module engages students in the areas of tourism business planning and development, product innovation in tourism, destination promotion strategies, creating tourism competitiveness and interpretation of heritage tourism. The module aims to enhance students' analytical skills towards tourism related business planning and development, creating value innovation in tourism business, strategic development in destination marketing and creating tourism business competitiveness.

CAREER OPPORTUNITIES

According to leading authorities, including the World Tourism Organization (WTO), the Thai Hotels Association (THA) and the Tourism Authority of Thailand (TAT), the tourism and hospitality industry in Thailand has continued to expand in both scope and scale. Therefore, the industry provides unique opportunities for career advancement and professional development. There are significantly increasing demands for graduates in tourism and hospitality programs, who are outstanding in international skills and experiences. Due to the up-to-date knowledge and skills from our tourism and hospitality management curriculum, our graduates are well-equipped with the necessary tools for their work lives, including a high level of English proficiency and practical experience from the national and international internship programs. For more than 20 years, our graduates have become more widely accepted by organizations in the tourism and hospitality industry, not only in Thailand but also in other countries around the world.

MUIC's Tourism and Hospitality Management (THM) Division is now one of the most respected educational institutions in Thailand, aiming to provide training and knowledge for middle and senior management professionals of the future. The THM Division has established excellent links with the tourism and hospitality industry in various sectors (e.g. hotels, airlines, food & beverages, event organizers and tourism organizations) and has a growing national and international reputation for quality in tourism and hospitality education.

This course surveys research, which incorporates psychological evidence into economics. Within economics, the standard model of behavior is that of a perfectly rational, self-interested utility maximizer with unlimited cognitive resources. In classical economic theory, this provides a good approximation to the types of behavior that economists are interested in. However, over the past 30 years, experimental and behavioral economists have documented ways in which the standard model is not just wrong, but is wrong in ways that are important for economic outcomes. Understanding these behaviors, and their implications, is one of the goals of behavioral economic enquiry. Hence, the aim of this course is provide a foundation in the main areas of study within behavioral economics, including temptation and self-control, fairness and reciprocity, reference dependence, bounded rationality and happiness. For each area of study we will begin with the standard model of rational decision making, and discuss what behavior this model can and cannot capture. We will then discuss the experimental evidence that indicates that the standard model is missing something important, and the models that have sprung up to account for these violations. Finally, we will look at the implications of these new models for our understanding of how the economy operates.
